## Colorants for Non-Textile Applications

This volume examines the chemistry of natural and synthetic dyes produced for non-textile markets, where much new basic research in color chemistry is now taking place.

The first group of chapters covers the design, synthesis, properties and application technology pertaining to dyes for digital printing and photography. The reader will be pleased with the breadth and depth of information presented in each case. Of particular interest is the discussion of strategies for the design of dyes in these categories, with emphasis on enhancing technical properties. In view of certain new developments, the ink-jet chapter includes results from studies pertaining to dyes for textiles.

The three chapters comprising Section II of this volume cover the broad subject of dyes for food, drug and cosmetic applications and then provide an in-depth look at dyes for biomedical applications and molecular recognition. The chapter on dyes for molecular recognition places emphasis on applications in the biological sciences, including sensory materials and artificial receptors. While the former two topics have been covered elsewhere in the past, the present chapters are unequalled in scope.

Section III provides an in-depth review of the design of laser dyes and dye-based functional materials. In the first of the two chapters, the major principles of laser operation are summarized. This is followed by a discussion of spectroscopic properties, such as activation and deactivation of absorbed light by laser dyes.

Approaches to the development of new laser dyes are presented. The second chapter pertains to the synthesis of dicyanopyrazine-based multifunctional dyes. The visible and fluorescence spectra of these dyes in solution and the solid state are correlated with their three-dimensional molecular structures. Molecular stacking behavior and solid state properties of these "multifunctional" dye materials are presented.

The final group of chapters pertains to natural dyes and dyes for natural substrates. In recent years, the impression among certain consumers that "natural" is better/safer has generated much interest in the use of natural dyes rather than synthetics. This has led to a few short discussion papers in which the environmental advantages to using natural dyes have been questioned. The initial chapter in this group provides both a historical look at natural dyes and a comprehensive compilation of natural dye structures and their sources. Though natural dyes are of interest as colorants for textiles, selected ones are used primarily in food and cosmetics.

Chapter ten provides an update on the author's previous reviews of structure-color-relationships among precursors employed in the coloration of hair. Chemical constitutions characterizing hair dye structures are presented, along with a summary of available precursors and their environmental properties. Similarly, the chapter on leather dyes covers constitutions and nomenclature, in addition to providing interesting perspectives on the origin and use of leather, the dyeing of leather, and key environmental issues.

This volume is concluded with another look at colors in nature. In this case, rather than revisiting colors in plant life, an interesting chapter dealing with color in the *absence of colorants* is presented. Chapter twelve covers basic concepts of color science and illustrates how 3-D assemblies leading to a plethora of colors are handled in nature. It is our hope that this atypical "color chemistry" chapter will invoke ideas that lead to the design of useful colorants.

The chapters presented in this volume demonstrate that color chemistry still has much to offer individuals with inquiring minds who are searching for a career path. This work highlights the creativity of today's color chemists and the wide variety of interesting non-textile areas from which a career can be launched.

### From reader reviews:

#### **Luke Shaffer:**

Hey guys, do you would like to finds a new book to study? May be the book with the title Colorants for Non-Textile Applications suitable to you? The actual book was written by renowned writer in this era. The actual book untitled Colorants for Non-Textile Applications is the main one of several books that will everyone read now. This particular book was inspired many men and women in the world. When you read this e-book you will enter the new shape that you ever know ahead of. The author explained their plan in the simple way, and so all of people can easily to be aware of the core of this book. This book will give you a wide range of information about this world now. So that you can see the represented of the world on this book.

#### **Rosa Johnson:**

The guide with title Colorants for Non-Textile Applications includes a lot of information that you can discover it. You can get a lot of advantage after read this book. That book exist new understanding the information that exist in this guide represented the condition of the world today. That is important to yo7u to understand how the improvement of the world. This particular book will bring you throughout new era of the globalization. You can read the e-book on your own smart phone, so you can read that anywhere you want.

#### **Samantha Williams:**

A lot of people always spent their free time to vacation or even go to the outside with them household or their friend. Do you realize? Many a lot of people spent many people free time just watching TV, or perhaps playing video games all day long. If you wish to try to find a new activity this is look different you can read a new book. It is really fun for you. If you enjoy the book which you read you can spent all day long to reading a e-book. The book Colorants for Non-Textile Applications it doesn't matter what good to read. There are a lot of folks that recommended this book. We were holding enjoying reading this book. When you did not have enough space to bring this book you can buy typically the e-book. You can m0ore very easily to read this book from a smart phone. The price is not too costly but this book possesses high quality.

#### **Jimmy Putnam:**

Don't be worry in case you are afraid that this book will filled the space in your house, you may have it in e-book means, more simple and reachable. This specific Colorants for Non-Textile Applications can give you a lot of good friends because by you checking out this one book you have issue that they don't and make anyone more like an interesting person. This specific book can be one of a step for you to get success. This reserve offer you information that possibly your friend doesn't learn, by knowing more than additional make you to be great folks. So , why hesitate? We should have Colorants for Non-Textile Applications.
