Principles of Toxicology Testing Frank A. Barile

The evolution of toxicology testing finds its impetus in the continuing growth of the chemical and pharmaceutical industries, as well as the awareness of public health initiatives, needs, and responses that demand faster, more accurate, more economical methods for screening potential toxicity. Concurrent advances in biotechnology enable viable *in vitro* systems to compliment traditional animal toxicology testing methods. Today, both methods are often employed together in toxicological analysis, derivation of toxicity mechanisms, and pre-clinical drug development.

Principles of Toxicology Testing juxtaposes the principles of animal toxicology testing with *in vitro* alternative methods to highlight the importance of each for interpretation of the significance and relevance of the other. Divided into three parts, the book emphasizes the universal applications of the field as a science rather than the particular steps of laboratory technique. The first part introduces the fundamentals of the toxicology, toxicokinetics, and human risk assessment. The second part details toxicology testing in animals and describes acute, subchronic, and chronic studies as well as testing for mutagenicity and carcinogenicity. Focusing on study design and determination of classical indicators, it covers short and long term methodologies including dermal, ocular, and reproductive. Presenting the advantages and disadvantages of each method, part three introduces *in vitro* alternative testing such as cell cultures, cellular methods for acute systemic toxicity, as well as target organ and local toxicity. The author also considers contemporary issues such as chemical exposure, high throughput screening, and the efforts of US and E.U. regulatory agencies to standardize and validate *in vitro* techniques.

By bringing traditional and alternative testing methods into a single volume, Principles of Toxicology Testing challenges you to interpret the significance of toxicology testing results and construct a logical approach toward the ultimate purpose of testing.
