Methods in Modern Biophysics Bengt Nölting

Incorporating recent dramatic advances, this textbook presents a fresh and timely introduction to modern biophysical methods. An array of new, faster and higher-power biophysical methods now enables scientists to examine the mysteries of life at a molecular level. This innovative text surveys and explains the ten key biophysical methods, including those related to biophysical nanotechnology, scanning probe microscopy, X-ray crystallography, ion mobility spectrometry, mass spectrometry, proteomics, and protein folding and structure. Incorporating much information previously unavailable in tutorial form, Nölting employs worked examples and 267 illustrations to fully detail the techniques and their underlying mechanisms. *Methods in Modern Biophysics* is written for advanced undergraduate and graduate students, postdocs, researchers, lecturers and professors in biophysics, biochemistry and related fields.

Special features in the 2nd edition:

- Illustrates the high-resolution methods for ultrashort-living protein structures and new results for 6 proteins.
- Provides information on self-evolving computer programs - a method for the solution of extremely complex phenomena.
