Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC) S. Fred Singer, Craig Idso

This 880-page rebuttal of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC), three years in the making, was released in June 2009 by The Heartland Institute. Coauthored and edited by S. Fred Singer, Ph.D., and Craig Idso, Ph.D. and produced with contributions and reviews by an international coalition of scientists, it provides an independent examination of the evidence available on the causes and consequences of climate change in the published, peer-reviewed literature examined without bias and selectivity. It includes many research papers ignored by the IPCC plus additional scientific results that became available after the IPCC deadline of May 2006.

Chapter 1 describes the limitations of the IPCC's attempt to forecast future climate with computer models. The IPCC violates many of the rules and procedures required for scientific forecasting, making its projections of little use to policymakers.

Chapter 2 describes feedback factors that reduce the earth's sensitivity to changes in atmospheric CO₂. Scientific studies suggest the model-derived temperature sensitivity of the earth for a doubling of the pre-industrial CO₂ level is much lower than the IPCC's estimate.

Chapter 3 reviews empirical data on past temperatures. We find no support for the IPCC's claim that climate observations during the twentieth century are unprecedented or provide evidence of an anthropogenic effect on climate.

Chapter 4 reviews observational data on glacier melting, sea ice area, variation in precipitation, and sea level rise. We find no evidence of trends that could be attributed to the supposedly anthropogenic global warming of the twentieth century.

Chapter 5 summarizes the research of a growing number of scientists who say variations in solar activity, not greenhouse gases, are the true driver of climate change. We describe the evidence of a solar-climate.

Chapter 6 investigates and debunks the widespread fears that global warming might cause more extreme weather. The IPCC claims global warming will cause (or already is causing) more droughts, floods, hurricanes, storms, storm surges, heat waves, and wildfires. We find little or no support in the peer-reviewed literature for these predictions and considerable evidence to support an opposite prediction: That weather would be less extreme in a warmer world.

Chapter 7 examines the biological effects of rising CO₂ concentrations and warmer temperatures. This is the largely unreported side of the global warming debate, perhaps because it is unequivocally good news. Rising CO₂ levels increase plant growth and make plants more resistant to drought and pests. It is a boon to the world's forests and prairies, as well as to farmers and ranchers and the growing populations of the developing world.

Chapter 8 examines the IPCC's claim that CO₂-induced increases in air temperature will cause unprecedented plant and animal extinctions, both on land and in the world's oceans. We find there little real-world evidence in support of such claims and an abundance of counter evidence that suggests ecosystem biodiversity will increase in a warmer and CO₂-enriched world.

Chapter 9 challenges the IPCC's claim that CO₂-induced global warming is harmful to human health. The IPCC blames high-temperature events for increasing the number of cardiovascular-related deaths, enhancing respiratory problems, and fueling a more rapid and widespread distribution of deadly infectious diseases, such as malaria, dengue and yellow fever. The peer-reviewed scientific literature reveals that further global warming would likely do just the opposite and actually reduce the number of lives lost to extreme thermal conditions.

From reader reviews:

James Lindberg:

Do you have favorite book? If you have, what is your favorite's book? Reserve is very important thing for us to understand everything in the world. Each publication has different aim or even goal; it means that book has different type. Some people feel enjoy to spend their time to read a book. They are really reading whatever they acquire because their hobby is reading a book. Think about the person who don't like examining a book? Sometime, man or woman feel need book if they found difficult problem or perhaps exercise. Well, probably you will want this Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC).

Brandon Huff:

Does one one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Make an effort to pick one book that you find out the inside because don't evaluate book by its protect may doesn't work this is difficult job because you are scared that the inside maybe not as fantastic as in the outside seem likes. Maybe you answer can be Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC) why because the fantastic cover that make you consider with regards to the content will not disappoint anyone. The inside or content is fantastic as the outside or maybe cover. Your reading sixth sense will directly show you to pick up this book.

Edward Chavez:

As we know that book is significant thing to add our information for everything. By a e-book we can know everything we want. A book is a list of written, printed, illustrated or even blank sheet. Every year was exactly added. This publication Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC) was filled concerning science. Spend your time to add your knowledge about your scientific research competence. Some people has distinct feel when they reading some sort of book. If you know how big benefit of a book, you can truly feel enjoy to read a book. In the modern era like at this point, many ways to get book that you wanted.

John Day:

E-book is one of source of information. We can add our know-how from it. Not only for students but additionally native or citizen need book to know the revise information of year in order to year. As we know those publications have many advantages. Beside most of us add our knowledge, can bring us to around the world. With the book Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC) we can acquire more advantage. Don't you to be creative people? To get creative person must like to read a book. Just simply choose the best book that suitable with your aim. Don't always be doubt to change your life with that book Climate Change Reconsidered: The Report of the Nongovernmental International Panel on Climate Change (NIPCC). You can more attractive than now.
